

# S: Food chain - Food pyramid

The food chain represented as a pyramid with different levels is known as the food pyramid. Every living creature needs to eat other creatures below it. Every ecosystem has a different food chain, depending on which animals and plants live there. In the box given below, draw a food pyramid involving a carrot and a rabbit. Up to the tertiary level, the food pyramid needs to be drawn. Note: More than 1 animal can exist at the same level of the food chain.

A large, empty rectangular box with a solid black border, intended for the student to draw their own food pyramid.
